

After AI Adoption

A wider view of AI adoption
beyond the technology sector

The Organizational Shift

Experiment › Adopt › Redesign › Scale

Organizations have tools, pilots, and individual use cases. Fewer have redesigned work, developed people, and connected AI to measurable value.

The Next Questions

How should work change? Redesign the workflow, not just add a tool.

What should people learn? Build capability around real decisions and real work.

What should remain human? Keep judgment and accountability in the system.

Did it create value? Look for changes in behavior, performance, and return on investment.
